

CLOUD

FOR YOUR
desktop

The buy vs. rent argument has continued well into the 21st century. But with rapidly advancing technology, software availability and specialization driving the use of technology, network managers are wise to examine Cloud Computing options as a viable means of delivering immediate and scalable solutions to the desktop.

NETWORK SOLUTIONS

The computing power you need for your team

PERFORMANCE –

Provides the performance level necessary to deploy computing solutions quickly and cost effectively

QUALITY –

You use carrier managed equipment and network stored in manned facilities that are monitored 24 X 7

SECURITY –

Secure storage of data guaranteed

AVAILABILITY AND SCALABILITY –

Ensuring availability during peak traffic usage and scalable enough to handle the traffic efficiently

CLOUD COMPUTING CENTRIC –

Building towards the cloud distribution model significantly reducing core infrastructure procurement and maintenance costs

FEATURES & SUPPORT

ADMINISTRATION – You don't need to manage any of the procurement, installation or maintenance of services

FLEXIBILITY/SCALABILITY- Performance levels and space requirements can be scaled to meet any business need

PASS THROUGH SLA – iBandwidth delivers the same SLA guarantees by Service Guide to the underlying providers you would be entitled to if negotiating directly.

INDUSTRY STANDARD INSTALLATION INTERVALS – All installations are completed in industry standard intervals given standard conditions. With iBandwidth white glove project management support, your installation will be well documented and well communicated, insuring your goals are met within committed timeframes, and your satisfaction is assured.

*“We
Don't
Just Sell
Network,
we
Provide
Solutions*”

The power of a desktop, without the real estate

Cloud computing solutions from iBandwidth include all the network components you would otherwise have to buy, scale and manage yourself, without the elbow grease. Robust routers, firewalls, load balancers, web servers, app servers, and database managers are all available at your fingertips, allowing you to build the cloud solution you need to your specifications within minutes. Storage can be achieved via SAN or local disk – whatever you prefer. Whether your needs are general purpose, web applications, testing and development, or supporting variable and disparate workforces, our premier Cloud computing partners can provide you the infrastructure you need to get up and computing without the expense of box solutions requiring a full support team and forklift upgrades and software patches annually. Together with our IP Transit and Point to Point products iBandwidth Cloud Computing solutions can give you the access to the content resources you need in one convenient package.

SECURITY AND DIVERSITY
