

High traffic corridors between locations carrying critical enterprise data often require the security and consistency only a dedicated point to point connection can provide. With iBandwidth's Point to Point Ethernet connections, you can establish your own safe and secure private connections, guaranteeing service availability and accessibility 24 X 7 whether your traffic is going around the world, or just across town.

POINT TO POINT FOR YOUR BUSINESS

NETWORK SOLUTIONS

The Technology Advantage – Speed Where there's Need

Metro Fast E (100 MBPS) –

Point to point connections within a local market at Ethernet speed

Metro Gig E (200 MBPS to 1,000 MBPS) –

Point to point connections ideal to support larger applications or clients or to provide back up capability to an existing high usage link within a metropolitan area.

Metro 10 Gig (1,000 MBPS to 10,000 MBPS)-

Point to point hicap traffic support to support public internet exchanges and other speed intensive applications where volume is consistently high and latency is not tolerable, yet the geography is local.

Long Haul Fast E (100 MBPS) –

Point to point connections across the nation or world at Ethernet speed

FEATURES & SUPPORT

FULL SLA –

The SLA you receive on a contracted service will be the same as that of the underlying carrier – we pass through 100% of the SLA guarantee to you, and back up that assertion with our Service Guide. Typically 100% global network availability.

INDUSTRY STANDARD INSTALLATION INTERVALS –

Similarly, your service will be installed within the same committed interval as committed by the carrier. We add no management overhead to the timeline, and we manage the interval with the same urgency you would if negotiating direct with the carrier, minus all the headaches.

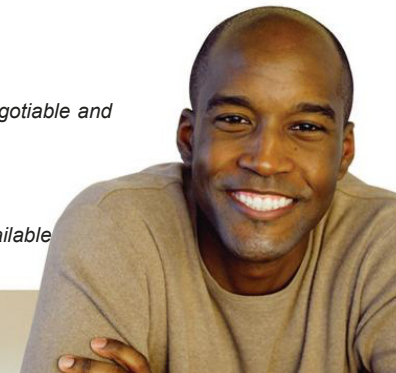

SIMPLIFIED HANDOFF –

Ethernet as standard – custom handoffs negotiable and special order.

24 X 7 CUSTOMER SUPPORT –

Customer care and maintenance support available 24 X 7

*“We Don't
Just Sell
Network
...We
Provide
Solutions”*

FLEXIBILITY AND CONTROL

The iBandwidth Difference – flexibility, diversity, and control

As with all iBandwidth services, you can select as underlying providers from a wide range of Tier I and Tier II providers, or let your design team formulate a customized recommendation based on an optimum mix of carrier providers and services to meet your unique needs. Your enterprise traffic will be delivered on an optimized mix of all-optical MPLS enabled IP backbone at speeds ranging from 100 MBPS and up. We can also provide protected solutions employing both carrier and path diversity in a service affecting event.

The iBandwidth Value

- > e-Consulting
- > e-Commerce Solutions
- > Project Management
- > Technology Insurance
- > Network Diversity
- > Billing Simplicity
- > Contract Flexibility
- > Support and Maintenance
